

Project Constraints Essay

YAHOS

One topical area that could constrain our project is economics. To develop the user interface for our project, we will be using Qt. Qt requires anyone using it for a professional project to pay for a license. Therefore, if we decided to release it commercially it would require purchasing an expensive license. Another topical area that could constrain our project is security. We'd like to test our application with malware, more specifically, testing our tool in an environment in which malware is executed. Therefore, there's a security risk if we don't have our environment configured correctly. Finally, our project also involves a constraint in the professional topical area. This project requires extensive knowledge of operating system internals, as well as programming expertise. Apart from this, the project will be used to showcase the skills of our group within the cybersecurity field; consequently, there exist constraints within the professional topical area.
